

SASK. INDUSTRY AND RESOURCES NEW ELECTRONIC SUBMISSION REQUIREMENTS FOR WELL LOGS

Effective April 1, 2007, *The Oil and Gas Conservation Regulations, 1985* will be changed to require submission of all geophysical well logs in electronic format (both LAS and TIFF). During a six month period (April 1 to October 31, 2007), SIR will require the submission of one hardcopy of each log, in addition to copies of the electronic format logs (as outlined below), for each different log run on a well.

The Operator will be required to submit, to SIR:

- One LAS copy of all logs run
and
- One TIFF copy of all logs run
or
- Three paper copies of all logs run (if not producible in either LAS or TIFF format)

Exceptions to the above:

- Three copies of Directional Surveys shall be submitted in paper format.
- Three copies of Geological Strip logs shall be submitted in paper format.

Electronic Log Submission Standards:

- LAS format means LAS (ver. 2) format; and
- TIFF format means in accordance with the Canadian Well Logging Society standards as proposed September 28, 2004.
- These standards will be reviewed and, if required, updated from time to time, as necessary.

Key Points:

- All other well data (ie. forms, reports, analyses, survey plans, licences, etc.) shall continue to be submitted in paper format
- The log files can be submitted on CD or DVD.
- The logs will be marked “received and approved” only when SIR personnel have viewed and verified that all required logs have been submitted in acceptable formats and are not corrupt in any way.
- As with all submitted well data, the logs must be labeled with the official well name, location and licence number (Sec. 89.2 of the *The Oil and Gas Conservation Regulations, 1985*).
